

Here are three quick, easy starter questions, broken down by concept:

1. Ratio

A basketball team's starting lineup has 2 guards and 3 forwards. What is the ratio of guards to forwards on the court?

(Answer: 2:3)

2. Rate

You ride your mountain bike 20 kilometers in 2 hours at a steady pace. How many kilometers are you riding per hour?

(Answer: 10 km/hr)

3. Proportional Thinking

A local shop sells 2 large pizzas for \$30. If you wanted to buy 4 large pizzas for a party, how much would it cost?

(Answer: \$60)

Would you like me to generate a few more variations or dial the difficulty up or down for your class?
